

Control Group Comparison

Fall 2006

This chart shows an improvement in the *Teach One to Lead One*® students as compared to a decline in the students that participated in the Control Group. A higher response value represents an improvement in the students' attitude, behavior and understanding of universal principles. "Pre" refers to the survey at the beginning of the T1L1 program, while "Post" refers to the same survey administered at the end of T1L1.

What do the colors mean? Green to Black shows the downward trends in behavioral traits scores for the Control Group (the students who did not participate in T1L1). Blue to Gold shows the upward trends for the same traits for T1L1 students.
